

INTERNATIONAL DANCE PARTY

Technical Rider (I): International Dance Party

Dimensions of the piece

Width: 118 cm

Height: 128 cm (With light FX stage opened: 169 cm)

Depth: 68 cm (With speaker latch opened: 99 cm)

Weight: 177 Kilos

Size of the exhibition space

The absolute minimum size is 6 by 4 metres.

A recommended exhibition space is 40m².

Interference with other artworks

Sound

The IDP can become very loud and can occasionally disturb other sound related artworks.

Light

The IDP requires controlled lighting conditions.

Radio waves

The IDP controls external lights and uses RC socket adaptors for that purpose, which work on a radio frequency of 433MHz.

Power Requirements

The IDP runs on 120 VAC and has a maximum load of 1500 Watts.

Other External Requirements (I)

The IDP requires an external subwoofer system, which can be connected to the IDP via RCA or minijag. The subwoofer should be visually hidden in the exhibition space.

The IDP has to be presented inside a square of four stanchions, which are connected with four red ropes (two ropes with 5ft length, two ropes with 4ft length) to avoid that visitors touch the piece.

Technical Rider (II)

Other External Requirements (II)

The IDP has to be lit by four spotlights. The machine will switch those spotlights via remote controlled socket adaptors. Currently, the spotlights cannot exceed a maximum load of 500 Watts per lamp and they have to run on 120 Volts.

We can also provide the RC hardware for 220V. Please come back to us, if you'd prefer to provide and switch 220V spotlights instead of 120V spotlights.)

The IDP's fog machine requires a frequent refill of fog liquid. Depending on how long the exhibition goes, we expect the exhibitor to provide and refill the fog liquid.

For further technical details, please contact Niklas Roy (nikl@ds-roy.de) or consult the IDP manual, which you can download here:
